The present invention is directed to a rechargeable chemical oxygen iodine laser (COIL) system, and to a method of operating and maintenance of such a system. A chemical oxygen iodine laser (COIL) is a gas laser that produces a laser output in the visible (i.e., red) wavelength region, which is unattainable with other laser systems. It is reported that a COIL system can achieve a gain of about 5 dB and produces a free running output at 1.064.mu.m or 1.32.mu.m wavelength in a pulsed optical mode of about 0.2 to 1 msec. Among other advantages, this wavelength produces much less damage than laser beams in the wavelength region of 0.8-1.0.mu.m. However, in the prior art designs of COIL systems that are reported in the patent literature, the total volume of the system is large, and in many designs, the gain is not sufficiently high. Moreover, the designs of such systems do not maximize the power that is available at the end of the system. Therefore, it is an object of the present invention to provide a COIL system that has improved characteristics.

attention of a corrupt cop and has been reduced to working for his boss, Crassus. Crassus has other plans for him, however, and Malcolm is beginning to question what his purpose is. The world of Anco's Jossiah is even more unusual than it was for me in Set Free. I've been to New York City, so it's easy for
