Click here to visit the website. \*\*\*Editor's Note: This article's headline was updated to more accurately reflect the contents of the original article.\*\*\* \*\*Editor's Note: This article has been updated since its initial posting.\*\*\* Positive potentials distinguish metaphorical from literal use of spatial terms in norm-space drawings. Positive potentials were measured at midline and parietal sites in norm-space drawings. Metaphor-inducing conditions (Metaphors vs. Likenesses) elicited a broad positivity at midline sites. Parietal positivity was more marked for metaphorical than for literal conditions. Parietal positivity, however, occurred for more types of deviation from norm-space than occurred for midline positivity. Positivity at midline sites was not different for metaphor-inducing and matching conditions. These results show a dissociation between midline and parietal regions in norm-space processing. These results provide further evidence for the involvement of frontoparietal regions in metaphor. The Latest: Iran says world will pay price for killing Soleimani The Islamic Republic of Iran says the world will pay the price for the U.S. airstrike that killed a top Iranian commander, according to the country's state TV. APMAC is celebrating one of its biggest annual summits ever Monday — but it has a lot to celebrate. More than 700 attendees have arrived at the Washington Convention Center for two days of bipartisan sharing of war stories, constant dancing and boozy celebratory meals. It's the place to be in Washington. But what
